

Beyond Possession Existence: Duration and Co-Possession

Dhivya Chinnappa^{*}, Srikala Murugan[†], Eduardo Blanco[†]

^{*}Center for Cognitive Computing, Thomson Reuters

[†]HiLT Lab, University of North Texas

^{*}work done at the University of North Texas

Problem statement

- Possession - asymmetric semantic relation between two entities (possessor and possessee)

Example: John rented a car.

- Types - ownership or not?
 - Temporal anchors - when?
- Possession duration
 - How long? hours? months? years?
 - Co-Possession
 - More than one possessor?

Dataset - curated from existing possession corpora

- Banea et al. (NLE, 2018)
 - Blogs (authors of blogs, objects mentioned in blog)
 - 799 instances
- Chinnappa and Blanco (NAACL, 2018)
 - Ontonotes (persons, concrete objects)
 - 358 instances
- Chinnappa et al. (EMNLP, 2019)
 - Tweets with images (authors of tweets, concrete objects)
 - 1,100 instances

Total: 2,257

Annotation process: Possession Duration

- Labels:
 - Lower bound and Upper bound (e.g., 10 minutes to 1 hour)
- Kappa agreement by converting bound values to normal distribution
(Pan et al., 2011): 0.37

Possessor: **person**

Possessee: **home**

Annotator 1:

Lower bound: **6 months**

Upper bound: **50 years**

Annotator 2:

Lower bound: **1 year**

Upper bound: **100 years**

Possession Duration: Bound values to discrete labels

- Deduced from histogram of mean of bound values
- Labels: short, medium, long
 - short: ≤ 6 hours
 - medium: > 6 hours & ≤ 10 months
 - long: ≥ 10 months
- Cohen's kappa: 0.63

Annotation process: Co-Possession

- Does the possessee belong to a possessor than the possessor mentioned?
- Labels: Yes or No
- Cohen's kappa: 0.65

Examples: Ontonotes, Blogs

	Sentence with possessor and possessee	Dur.	Co-pos
1	Everything served cold, with ice cream , fruit salad and strawberry yoghurt pudding for dessert [...] (author of weblog)	short	no
2	"At least we have the decency to drop bombs from airplanes", he said.	med.	no
3	I had to get out my phone for a couple pics.	long	no
4	We took a taxi along the path of the highway that heads toward Disney, trying to experience this mysterious park from close by.	short	yes
5	The first two months of the summer,[...] and then the last two months, the dealership was able to provide me with a loaner car . (author of weblog)	med.	yes
6	They kept my father's car for a year without writing a confiscation order.	long	yes

Examples: Tweet

Possessor: **AJ (Author of tweet)**

Possessee: **computer**

Possession duration: **long**

Co-possession: **no**

Examples: Tweet

Possessor: **P.B. (Author of tweet)**

Possessee: **jackets**

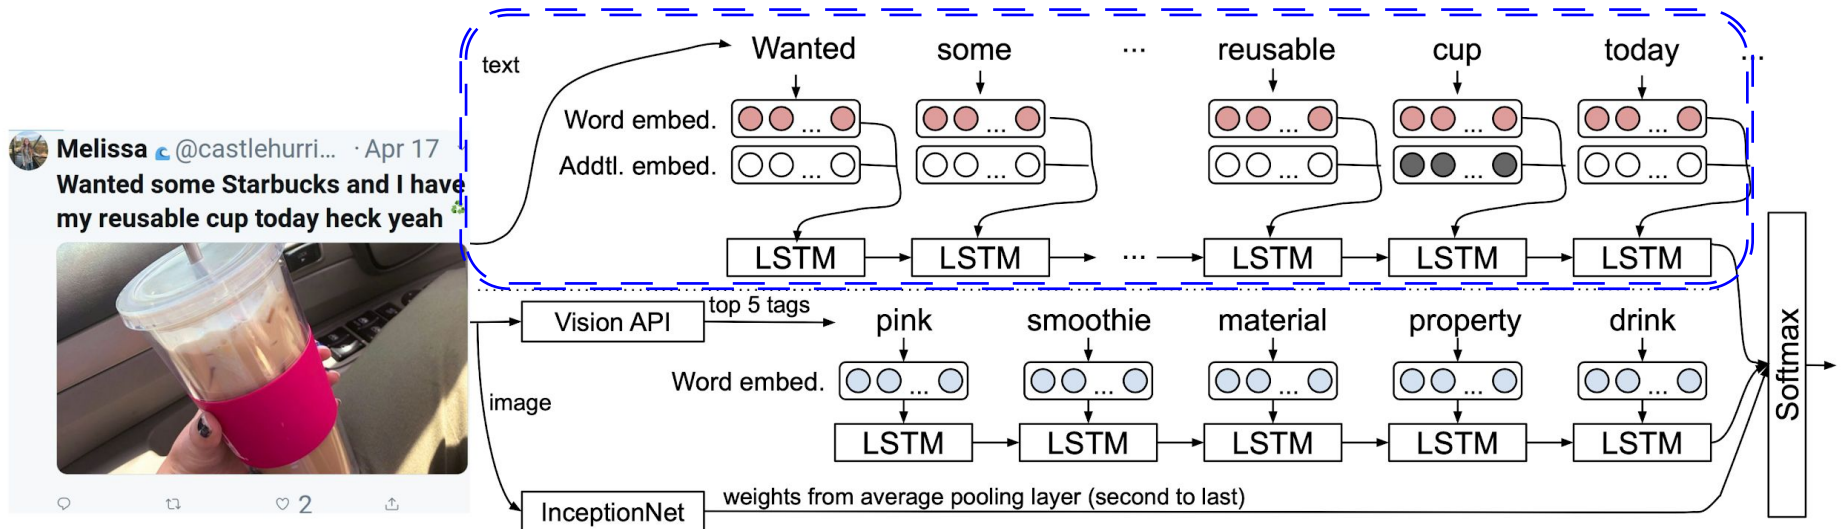

Possession duration: **medium**

Co-possession: **yes**

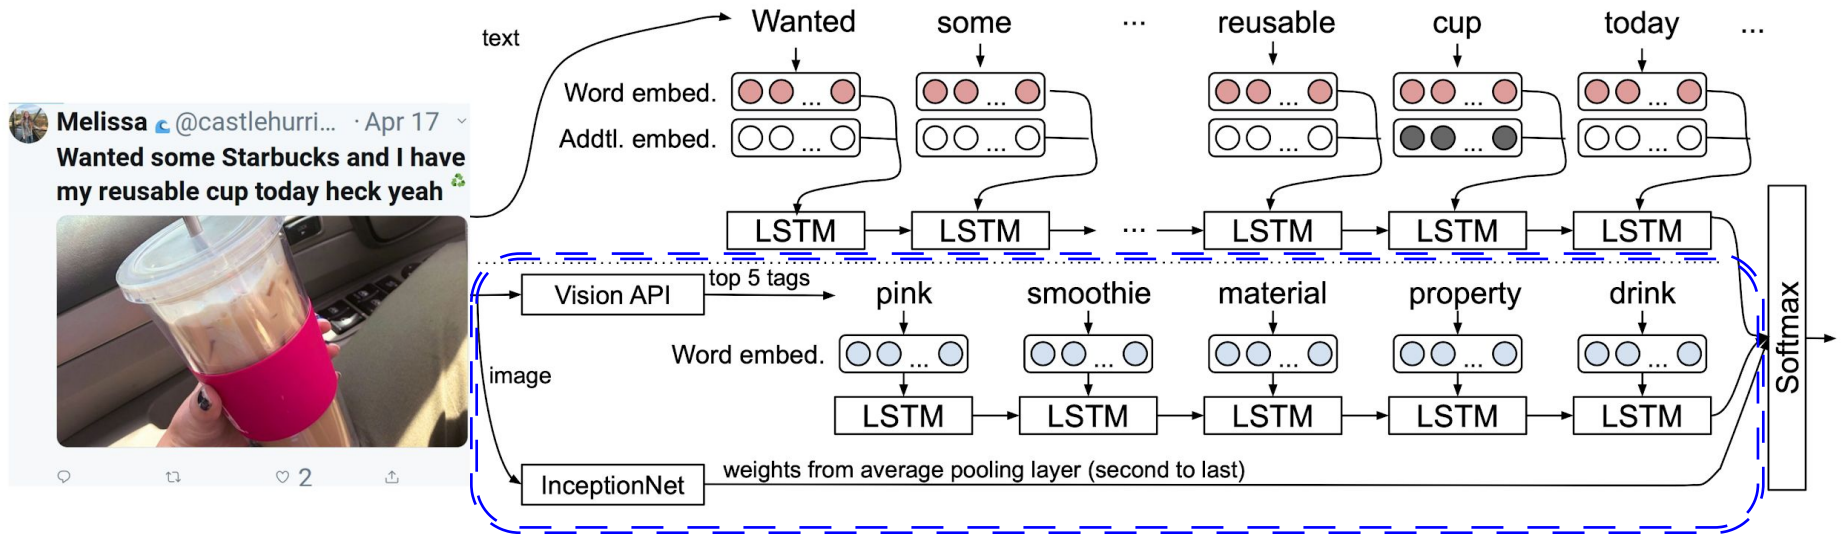

Architecture

Text component: Glove embeddings

Architecture

Image component: InceptionNet weights + Vision API tags

Results

- Blogs + Ontonotes:
 - Possession duration: 0.82 F1
 - Co-possession: 0.73 F1
- Tweets:
 - Possession duration
 - Text only: 0.65 F1
 - Image only: 0.49 F1
 - Text +Image: 0.56 F1
 - Co-possession
 - Text only: 0.68 F1
 - Image only: 0.63 F1
 - Text +Image: 0.64 F1

Conclusions

- Extract possession duration and co-possession over corpora confirming possession existence
- Possession duration -- bound values and discrete labels
- Co-possession --yes or no
- Experimental results show images are not very useful in identifying possession duration and co-possession
